Physiology on the Fly September 23-28, 2018

The MDI Biological Laboratory is pleased to present [Physiology on the Fly](#) in our state-of-the-art Maine Center for Biomedical Innovation in Bar Harbor, Maine.

This course is a hands-on comparative physiology-based faculty development program aimed at equipping clinician educators teaching residents and/or medical students on the internal medicine wards with the confidence and ability to integrate physiology and mechanistic thinking into their daily teaching and medical decision making.

Goal 1: To inspire clinician educators to teach physiology on the wards and incorporate mechanistic thinking into their clinical decision making.

Goal 2: To give clinician educators the time and space to re-familiarize themselves with basic concepts of physiology applicable to the internal medicine wards.

Goal 3: To give clinician educators durable tools and resources to locate and review the physiology and mechanisms of disease processes in their ongoing clinical and teaching roles.

Continuing Medical Education (CME) credits are offered through the University of Vermont. Check the [Physiology on the Fly](#) course page for more information.

More Information

Details on the course are available on the [Physiology on the Fly](#) course page. Applications are open now. Medical educators are encouraged to apply.
