Bioinformatics T3: Train the Trainer

The Integration of Bioinformatics into an Undergraduate Biology Curriculum

June 26 - July 3, 2021

The Bioinformatics T3: Train the Trainer project has three components:

- A short course for undergraduate instructors with hands-on activities, including both wet-bench laboratory and bioinformatics experiences.
- A dedicated web portal with links to instructional resources, online step-by-step video tutorials, case studies, and a forum for building a Community of Bioinformatics Trainers.
- Support for delivering the curriculum that includes access to a dedicated server with bioinformatics software.
